

INTRODUCING THE NEXT GENERATION FEED ROLLER.

Part # - 62243 KIT Black Roller & Core ASSY

The Next Generation Roller for Nevada Gold® ticket dispensers is an upgrade to the current rollers that have been in the field for decades. The Next Generation Roller significantly enhances the ability of the back feed roller to dispense tickets. The upgraded design and materials were engineered to provide superior traction and longer durability.

We have changed the color of the back roller to black for two reasons:

1. The new color will offer easy recognition to your technician when determining when the wheel was last changed.
2. The roller's darker color highlights any accumulation of light colored paper dust, shavings, or clay on the wheel. The accumulation of these materials indicates the need for preventative maintenance (see Roller Maintenance flyer attached).

Going forward all feed rollers will be sold with the shaft attached. This roller upgrade will be the new roller standard.
