

Tech Bulletin

Issue Date: 05/19/2010

Equipment Affected: LD7 20 Bay Charging Rack [BNG-07-RACK]

Version Affected: All

Discrepancies: The rack is designed to utilize 7amp per rack when the units are off and 9amp per rack when units are on and charging. Previous communications included instructions to utilize four (4) racks per 20amp circuit. This is causing circuits to be blown and possible circuitry damage to the racks themselves.

Solution: Place two (2) 20 bay charging racks per 20amp circuit. Keep in mind all other items placed on that circuit and their requirements. This will alleviate any chance of power disruption while units are charging.
